 Measured at the discharge terminal point of the compressor package in accordance with ISO 1217, Annex E ACFM is actual cubic feet per minute at inlet conditions.

b. The operating pressure at which the Capacity (Item G) and Electrical Consumption (Item K) were measured for this data sheet.

- d. Total package input power at other than reported operating points will vary with control strategy.
- e. Isentropic Efficiency = theoretical power required divided by real measurement performance at same flow and pressure **For Variable Speed, this value combines 3 Measured Points: (25% x 40%LOAD) + (50% x 70%LOAD) + (25% x 100%LOAD)
- f. Pressure Ratio = the ratio of discharge pressure to inlet pressure, as determined at full-load operating pressure For more information go to: https://www.quincycompressor.com/resources/data-sheets/
- ***This form was developed by Quincy Compressor to publish equipment performance data in accordance with applicable energy conservation standards adopted under EPCA (42 U.S.C. 6295(s) and 6316(a))***
