### Rotary Compressor: Fixed Speed

**Manufacturer:** Quincy Compressor  
**Base Model:** QGS-40  
**Cooling:** Air-Cooled  
**Type:** Oil-Injected Screw

**Full-load package Isentropic Efficiency**  
\[ \eta_{isen} \]  
**at Rated Capacity and Full Load Operating Pressure:** 63.1 Percent

**NOTES:**

- a. Measured at the discharge terminal point of the compressor package in accordance with ISO 1217, Annex E. ACFM is actual cubic feet per minute at inlet conditions.
- b. The operating pressure at which the Capacity (Item G) and Electrical Consumption (Item K) were measured for this data sheet.
- c. Maximum pressure attainable at full flow, usually the unload pressure setting for load/no load control or the maximum pressure attainable before capacity control begins.
- d. Total package input power at other than reported operating points will vary with control strategy.
- e. Isentropic Efficiency = theoretical power required divided by real measurement performance at same flow and pressure.
- **For Variable Speed, this value combines 3 Measured Points: (25% x 40% LOAD) + (50% x 70% LOAD) + (25% x 100% LOAD)**
- f. Pressure Ratio = the ratio of discharge pressure to inlet pressure, as determined at full-load operating pressure.
- **For more information go to: https://www.quincycompressor.com/resources/data-sheets/**

**Specific Package Input Power at Rated Capacity and Full Load Operating Pressure:** 23.82 kW/100 cfm

* Quincy Compressors tests all models according to the U.S. Department of Energy (DOE) Energy Conservation Standards for Air Compressors. Consult the Final Rule (82 FR 1052) in the Federal Register for additional information [https://www.federalregister.gov](https://www.federalregister.gov)
